

**EHL Bio with  
Absolute Certainty,  
Incredible Potential**

**Science that transcends the limits  
Definitive promise for the future**

EHL Bio does not stop at being the first and the best in the world.  
Science, leading towards an ideal future.  
Being the best, realizing the possibilities of the ideal.  
We are putting in our best efforts for humanity and a new tomorrow on the basis of experiences in the research and development in stem cells that we accumulated for over more than 10 years, the miracles of life science we will be creating in the future and our highly efficient technological capabilities.

# ABOUT EHL BIO

EHL Bio Co., Ltd. is a R&D institute, established to develop the methods of overcoming various diseases and aging in order to extend the lifespan of mankind to enjoy a youthful and healthy life.

We are developing treatment preparations using stem cells, the key to regenerative medicine in the future, and leading the commercialization of technologies for the separation, cultivation, and cryogenic storage of stem cells as well as treatments using stem cells.

EHL Bio Research Institute is putting in our utmost efforts into our research of regenerative medicine for alopecia treatment, anti-aging, health improvement and Dermocosmetics, etc., and R&D for the purpose of the treatment of diseases of the nervous system, cartilages, blood vessels and the endocrine system, etc.

We shall become the leading global company that makes contributions towards the enhancement of mankind throughout the world by helping out researches develop "expertise" and innovating stem cell application technologies.

Esthetic

Health

Longevity

EHL is the abbreviation of Esthetic, Health and Longevity and symbolizes healthy human tissues, regenerated using stem cells. The logo mark of EHL contains the vision of a bioengineering company pursuing health and a beautiful life.

1

### Securing of stable stem cell collection, isolation and culture technology

- Hold our independent cell proliferation know-how
- Stem cell retrieval rate that is beyond 1,000 times higher than our competitors
- 99% isolation of the mesenchymal stem cells in the adipose tissues

2

### Obtains the best level GMP facility

- Maintenance of a clean facility at a Class100 level
- Establishment of a stem cell storage tank and preservation system
- Less than 1% of error range in survival rate prior to and following the freezing of the stem cells

3

### Establishment of a competitive research network

- Joint research on stem cells with the Veterinarian Science College of Seoul National University
- Joint research on stem cell conditioned media with the Medical School of Chungnam National University
- Stable source of supply for stem cells secured through the Diet Medical Center

4

### Abundance of clinical experiences in the areas of alopecia treatment and prevention of skin aging

- Operation of specialized hospitals in the same area for more than 20 years
- Procedures performed by specialists with the experience of having performed over 5,000 cases of lipo-sculpture

5

### Abundance of experiences in the area of the development of cosmetic products

- Obtains multiple numbers of cosmetic products that the clients in the area of aim to plastic surgery
- Launching of cosmetic products that contain 97% human-derived adipose stem cell conditioned media

## Unrivalled technological capabilities, EHL Bio

EHL Bio Research Institute Co., Ltd. adopts the most advanced facilities and systems that are comparable to the GMP (Good Manufacturing Practice) of the standard for the manufacturing of medical products in order to store stem cells and cellular treatment preparations that are safer and more advanced. Research staff, with the most advanced life science technologies throughout the entire process of stem cell extraction, cell isolation, culture specialization and preservation, etc., have participated in contributing to our utmost efforts to supply the safe and most advanced stem cells with specialized technologies unique to EHL Bio Co., Ltd.

# STEM CELL

stem cells meaning

Stem cells are undifferentiated cells with the capability to become any form of body tissue by diverse specialize into the brain, skin, cartilage, bone, nerve and muscular cells, and are the bodily resources essential to maintain a healthy life by delaying the aging of the body.

## Characteristics of stem cells

### Homing Effect

Stem cells injected into the human body have the ability to find the damaged parts of the body on its own to regenerate the that points.

### Self-Renewal

Stem cells can be proliferated into the cells with the configurations and abilities to be exactly same.

### Multipotential

It can be differentiated into a diverse range of tissues and organs including the heart, bone, nerves, liver and skin from its undifferentiated state in accordance with the need of the human body.

## Types of stem cells

### Embryonic Stem Cell

These are stem cells in the embryonic stage less than 14 days from the date of fertilization of the ovum by sperm, to grow into all types of cells and tissues.

### Adult Stem Cell

Undifferentiated cells existing in various tissues of the human body, which can be obtained from bone marrow, adipose and umbilical cord blood, etc., and differentiate into necessary tissues.

### Induced Pluripotent Stem Cell

These are stem cells created through induced reverse cellular differentiation by manipulating the genes of particular fully grown somatic cells.

## Functions of the stem cells

**Treatment of injuries** | Regenerates damaged cells

**Regeneration of blood vessels** | Assists with harmonious supply of blood by regenerating damaged blood vessels.

**Differentiation function** | Differentiates the damaged cells to regenerate them into normal cells.

**Improvement of immune function** | Enhances immunity by improving the functions of the organs of the immune system.

**Activation of growth factors** | Regenerates tissues in the body by promoting growth factors including hormones and collagen, etc.

**Prevention of annihilation of cells** | Prevents the annihilation of cells within the human body.

# Mesenchymal stem cells

Mesenchyma is a tissue contained in the mesoderm of fetus that differentiates into bone, cartilage, lymphatic vessels and blood vessels, etc. Mesenchymal stem cells, which are capable of differentiation into such a diverse range of tissues, is the core of the ‘autologous cell therapy’ of treating diseases with one’s own healthy cells and the area of research in regenerative medicine receiving enormous attention at the moment.

Current status of the clinical trial for treatment preparations made from adipose stem cells

Origin of the cells	Cases for which an approval for a clinical test is in progress	Cases for which a clinical test has been approved
Adipose cells	6	3
Bone marrow	5	1
Umbilical cord blood	5	2
Total	16	6

Number. of stem cells for each 100ml of tissues

Source : <Clinics in Plastic Surgery 2006>

## Excellence of adult adipose stem cells

Although the embryonic stem cells can be differentiated into all types of cells, there are weaknesses of having to overcome the possibility of transition into cancer cells, as well as a range of ethical issues

On other hand, adult stem cells extracted from lipid, umbilical cord blood, and bone marrow, etc. can be used safely without ethical issues and the risk of manifestation of cancer. Among these, the adipose stem cells have numerous advantages including the possibility of the extraction of a large quantity of cells in comparison to other adult stem cells.

Types	Embryonic stem cells	Adult stem cells		
		Adipose stem cells	Bone marrow stem cells	Blood stem cells
Source of extracted cells	Ovum, fertilized egg	Adipose	Bone marrow	Umbilical cord blood
Securing of cells	Difficult	Easy	Difficult	Average
Mass production	Difficult	Easy	Difficult	Difficult
Differentiation ability	Outstanding	Highly outstanding	Poor	Outstanding
Ethical problem	Present	None	None	None
Possibility of occurrence of teratoma	Present	None	None	None
Contents of stem cells	A lot	Very much	Little	None

Embryonic stem cells

Adult stem cells

## 'Lipid', Repository of adult stem cells Adipose-derived Stem Cell

Adipose stem cells that can be extracted from a small quantity to form a large quantity of adipose tissues through simple adipose collection, is highly ideal for the research of regeneration medicine and the development of treatment preparations as there is no immunological problem. In particular, it is possible to obtain the largest quantity of mesenchymal stem cells from lipid extracted from the abdomen, thigh and hip, etc.

## Treatment of diseases using stem cells

Although the human lifespan has been extended through the advancement of science and medical science, a healthy lifespan of living comfortably while enjoying a high quality of life, is not quite reflected with an extended lifespan. Many people are suffering physically and mentally from diseases and disabilities arising from aging. In the modern era, 'Aging Well' is more important than living longer. Stem cells are the key to solve this problem. Stem cells are undifferentiated cells with the capability of growing into a diverse range of body tissues through differentiation into the brain, skin, cartilage, bone, nerve, muscle and immune cells, etc. Due to a stem cell's ability to replicate itself and to differentiate into tissue cells when needed, stem cells can be used in treating a countless number of diseases including incurable disease such as damages to spine or organs, pulmonary diseases, arthritis, diabetes, cardiac disease, Parkinson's disease, Alzheimer's disease and Lou Gehrig's disease, etc.

# EHL BIO

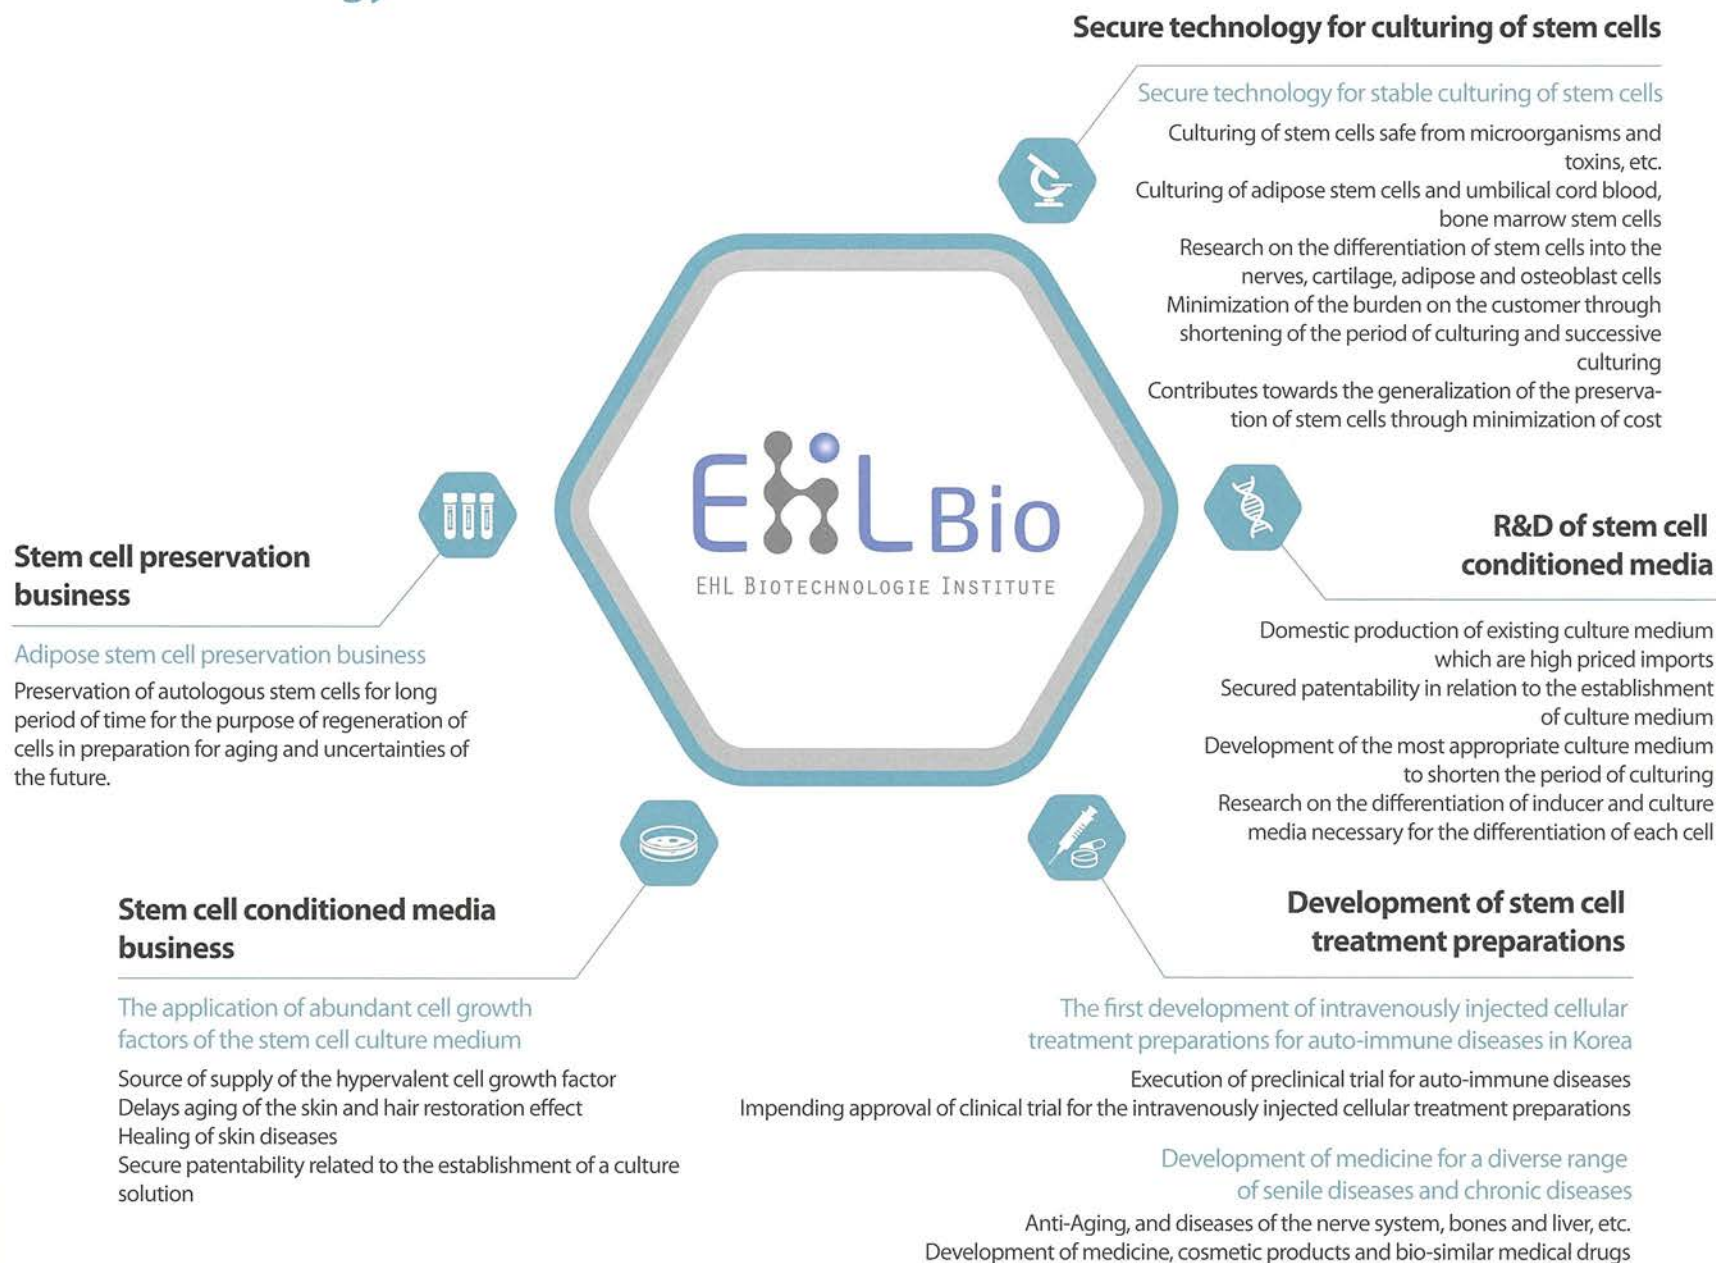

A full-page photograph of a laboratory setting. A scientist wearing a white lab coat, a surgical mask, safety glasses, and blue gloves is using a green pipette to transfer liquid into a petri dish. In the background, a microscope and various laboratory glassware are visible. The lighting is cool and blue-toned.

EHL Bio Co., Ltd. is a R&D institute established to develop for the methods of overcoming various diseases and aging in order to extend the average human lifespan and allow people to enjoy a youthful and healthy life.

We are developing treatment preparations using stem cells, the key to regenerative medicine for the future, and leading the commercialization of technologies for the separation, cultivation and cryogenic storage of stem cells as well as treatments using stem cells.

# Business Strategy

## Mission & Vision

### Stem cell medicine (Auto-immune Disease)

Development of auto-immune preparation and medicine by using autologous adipose-derived stem cells

### Alopecia medicine (Alopecia)

Development of alopecia medicine by using autologous adipose-derived stem cell conditioned media

### Immune cell medicine (Immune Cell)

Development of drugs for anti-cancer and immunity by using various immune cell culturing techniques.

### Plans for the development of cellular treatment preparation products

### Special Research

Secure safety test data for adipose-derived stem cell conditioned media  
Official approval by FDA of Korea as the raw material for cosmetic products for the protection and enhancement of the resilience of skin  
Establishment of stem cell conditioned media for the execution of a safety test  
Secure quantitative analysis data for the cytokine range including cell growth factors, etc.  
Launching of the only stem cell conditioned media cosmetic products for which the stability and establishment has been confirmed for the first time in Korea

### Special Research

Secures the best technology for culturing of adipose-derived stem cells  
Secures the maximum survival condition following the prompt harvesting of specimen treated stem cell culturing in accordance with the linkage between the hospital and research center at the time of the securing of the adipose cell  
(Secure the best cell freshness in Korea – Confirmation of a cell survival rate of more than 90% within 24 hours of having secured the cells for procedure)

### Special Research

Execution of the development of medicine for atopic dermatitis using adipose-derived stem cells  
Commencement of preclinical trial in January 2014: Consigned research to the Veterinarian Science College of Seoul National University  
Joint research with the Medical School of Chungnam National University (clinical trial portion)

### Global medical service business

#### Overseas medical services for patients in China and Southeast Asia

Dosi-ryeoin Cosmetic surgery clinic in Kunming, China  
Atlas Medical Laser Aesthetic in Singapore

#### Transfer of medical service technology to an overseas country

Bangkok in Thailand

#### Establishment of medical centers in Korea and overseas

Establishment of an Anti-Aging Center at the Diet Medical Center in Shanghai, China (scheduled)  
Establishment of hospital in Indonesia (scheduled)  
Hanoi, Vietnam  
Ulan Bator, Mongolia

#### Application for a patent

Application of a patent for the stem cell culture that includes key cell growth factors and cosmetic composition for improvement of atopy by using human adipose-derived stem cells (2014. 1. 23.)

**Technology development support project by the Small and Medium Business Administration**

Development of substances for the inducement of proliferation and differentiation of adipose stem cells

Research on the development and verification of the efficacy of a culture medium for the promotion of hair restoration using adipose stem cells (scheduled)

Development of raw material for the promotion of hair restoration by using adipose stem cell conditioned media

**Execution of national policy researches**

**Special Research**

Tracing of the substance that induces the proliferation and differentiation of the human adipose-derived stem cells  
Securing of source technology through linkage between stem cells and herbal medicine: Biochemical convergence research

**Research on development of medium for culturing of stem cells**

**Research Network**

**Veterinarian Science College of Seoul National University**

Research on development of a medium for the culturing of stem cells

Research on advanced establishment using Proteomics

Research on the effectiveness of stem cell treatment preparations for atopy

**Department of Dermatology of Chungnam National University**

Clinical test of stem cells on atopy

Joint research on the treatment preparations for hair loss using stem cell conditioned media

R&D for functional cosmetic products using stem cell conditioned media

**Plastic Surgery, Dermatology and the Obesity Clinic at the Diet Medical Center**

R&D on the treatment of hair loss by using stem cell conditioned media

R&D on autologous immune treatment by using stem cells

# Promises of Science

## EHL Bio Stem Cell Therapy

The best choice for preparing a healthy future for you and your family, EHL Bio stem cell preservation program

This program for the banking of stem cells by freezing them for a long period of time by extracting, separating, and culturing the adult stem cells from the autologous adipose tissues or placenta tissues when you are healthy in order to prepare for unexpected risks including aging, chronic diseases, and accidents, etc.

Personally experience the unlimited values and possibilities as well as the advancement of science through the preservation of stem cells. EHL Bio stem cell bank will preserve your stem cells in their optimal state to ensure that 10 years down the track, your youthfulness and health will be maintained at its present condition.

15

### **Owns the most advanced GMP facilities**

EHL Bio is manufacturing one of the world's safest and most outstanding stem cells at the highest level in the world through the strictest quality control on the basis of our accumulated experiences and the most advanced technological capabilities by having installed the latest equipment in accordance with the GMP standards.

### **Stem cell treatment linkage service**

EHL Bio, which conducts researches on stem cells through linkage with a diverse range of research institutions in Korea and overseas, provides medical visit services through cooperation with overseas hospitals in China, Japan and Singapore, etc. for customers wishing to undergo stem cell treatment.

### **Execution of clinical tests**

EHL Bio is continuously conducting R&D on stem cell treatment preparations in order to actually use the stem cells preserved in the bank. Currently, we are conducting clinical tests on treatment preparations for atopy and hair loss to acquire the approval of the Food & Drug Safety Agency (FDA).

## One-Stop System of EHL Bio for the Preservation of Stem Cells

	EHL Bio	Other companies
Collection of adipose cells	Personally conducted by a highly experienced specialist who has conducted more than 5,000 liposculptures	Request another hospital
When collect of adipose cells run parallel with surgical procedure	Link possible between liposuction, cosmetic surgery, hair transplant, laser surgery, etc	Restrictive
Distance of transfer of adipose cells	Minimization of the possibility of infection at the time of the transfer of the adipose cells since the hospital and research center are situated in one location	High possibility of infection since the hospital and research center are situated at different locations
Quantity of adipose cells collected	More than 50cc	20cc
Quality control	Request to the academia-industry cooperation group of the Hankuk University of Foreign Studies, FACS test	In-house experiment
Production of treatment preparations	Within 6 hours prior to procedure	Within 24 hours
Level of activation of stem cells	More than 90%	More than 80%
Management of the execution of procedure	Accompanied by medical staff	Fully assigned to the travel agency
Cost of procedure	Lower cost by 30%	
Donation of culture solution	Free donation if interested	At cost

## Process of stem cell separation

Fat collection

Transfer the fat contained in sterilized syringe to the laboratory

Transfer the adipose tissue to sterilized tube

filter adipose tissue from others

Centrifugation separation of the adipose tissues

Enzyme treatment

Enzyme reaction

Separation of the stem cell adipose tissue

Isolation of stem cells

Culturing of stem cells

Cultured stem cells

Stem cells that have undergone the culturing process are freeze preserved after having been subjected to quality control

### Quality control of EHL Bio

- Micoplasma negative test
- Exogenic virus negative test
- Aseptic test (direct method)
- Virus test (PCR method)
- Cell identification and purity test
- Titer test
- Aseptic test (Plate method)
- Endotoxin test
- Cell count and survival rate test
- Cellular appearance test

## STEM CELL PROGRAMS

### RICHMORE

Alopecia Treatment Program using stem cells

Hair loss is a phenomenon of hair falling out abnormally due to the effects of various factors including fatigue, stress, hereditary, age, season, race and specific diseases, etc. When cultivated autologous adipose derived stem cells collected from your own adipose tissues are injected into your scalp, growth factors are activated to make the scalp healthier, and the stem cells differentiate into follicle cells to regenerate hair growth.

It is very safe since there is no transplantation rejection reaction and side effects as one's own stem cells rather than someone else's stem cells are used.

It has a high level of utilization as cellular treatment preparation since a lot of cells can be obtained without deformity of the cells at the time of culturing the stem cells.

With a simple process of collection, it does not hinder daily life activities.

It is possible to extract a sufficient quantity of stem cells with a single collection, as a large quantity of stem cells can be obtained from a small quantity of adipose tissues.

It can not only prepare you for unexpected accidents or an emergency situation but also for various diseases arising from aging.

### POWER SKELETON

Program to make stronger knees using stem cells

Degenerative arthritis, which is suffered by 80% of the population over aged over 55 years, is the disease that can occur in anyone as one enters the stage of old age and occurs more frequently in women than in men due to women performing household chores as the main cause.

Since degenerative arthritis can be predicted, making preparations in advance is the best treatment method. It is a program aimed at making stronger knees with the autologous stem cells being collected when you are healthier.

### BACK TO THE GENERATION

A stem cell program to make you 10 years younger, preventing the rapid onset of old age

This is a program of preserving autologous adipose stem cells collected when you are healthier and then injecting them into your body when needed. It is highly effective in improving the immune function and aging of the body.

It is an essential stem cell program for a happier old age with increased energy and vitality.

### MY CELL COSMETIC

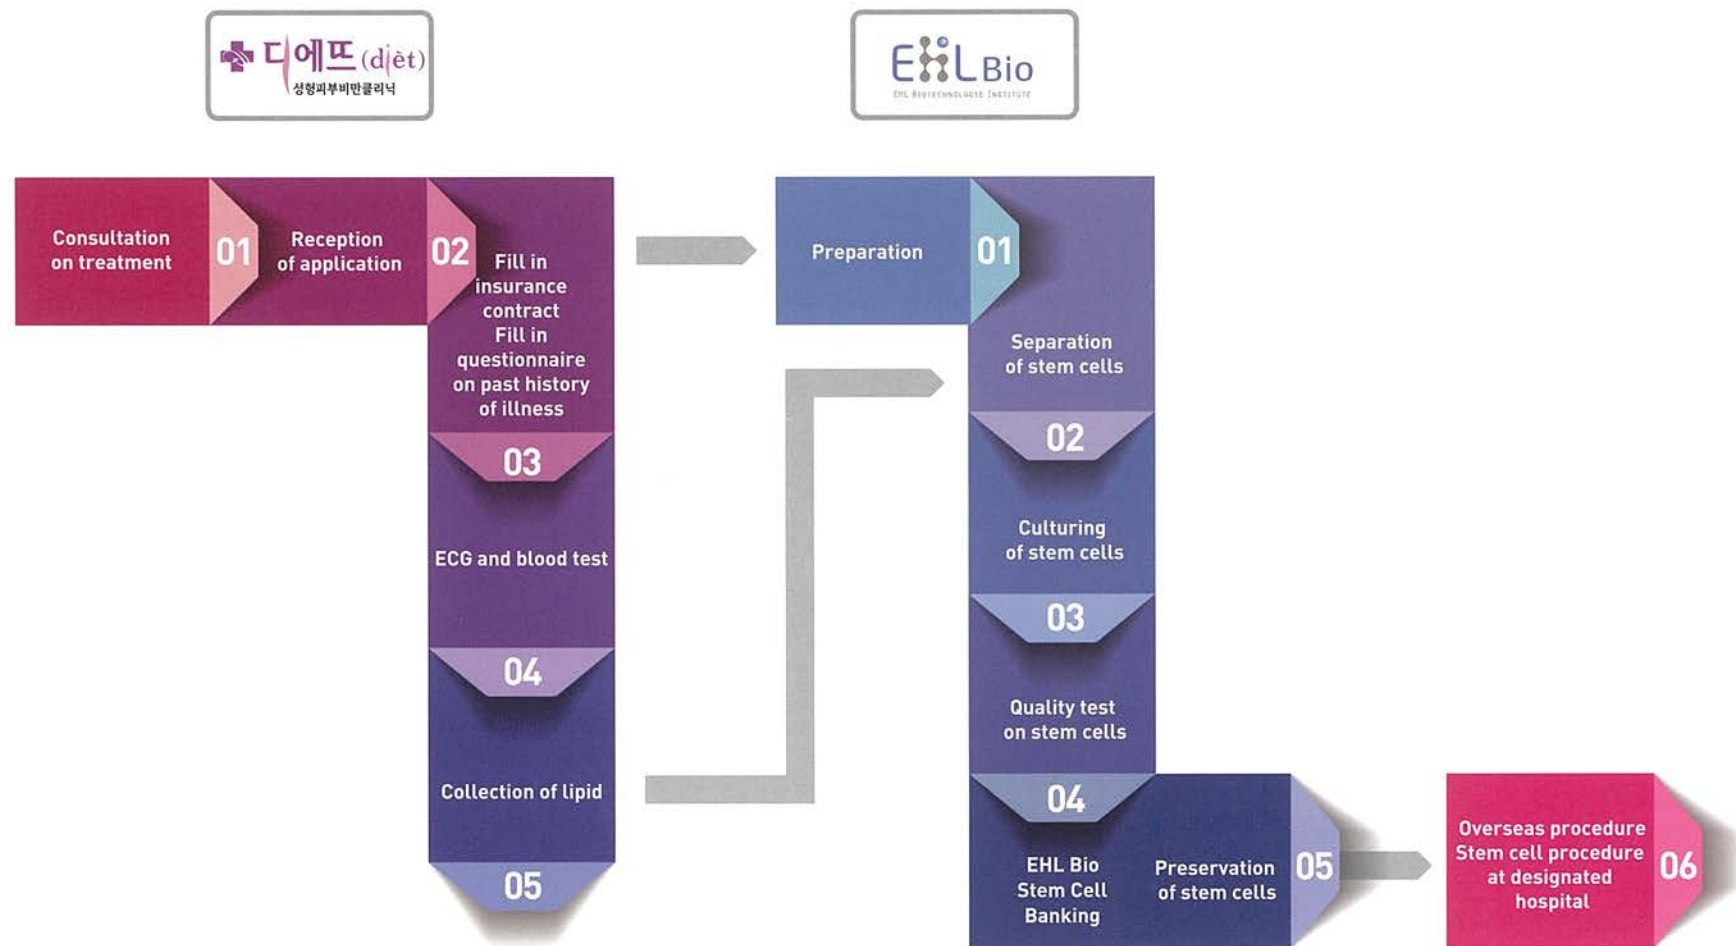

Your own and the only one customized cosmetic products in the world.

Stem cell cosmetic products made by culturing autologous stem cell conditioned media. With a skin-friendly cosmetic product, that is most appropriate for your skin, is absorbed into the skin quickly and displays outstanding skin cell regeneration ability. It is a program that produces healthy and fresh cosmetic products by mixing the best ingredients after having diagnosed the skin. It solves various problems of the skin and protects the skin from harmful environments.

## Joint Research on Stem Cells with the Diet Medical Center

Unlike other companies that separate stem cells by transporting the collected adipose tissues to a location outside the hospital, the EHL Bio research center and hospital (Diet Clinic Group) are situated in one location to minimize the possibility of infection following the collection of adipose tissues, as well as to shorten the time for production of treatment preparations by separating and culturing the stem cells. We provide services customized to the customers for both domestic and overseas procedures by culturing safe stem cells with a high level of activation.

## Global Network

The Diet Clinic Group is a hospital group specializing in cosmetic plastic surgery with the establishment of a global network that includes a total of 14 clinics throughout Korea with its headquarters in Gangnam, Seoul, as well as clinics in overseas countries including China, USA and Singapore. On the basis of the know-how accumulated by operating and managing hospitals over the last 25 years, we offer the best services in plastic surgery, obesity, hair and skin care, and gynecologic plastic surgery, etc., until our customers are fully content with the services rendered. In addition, we are providing overseas medical tourism services jointly with EHL Bio Co., Ltd. that specializes in R&D in stem cell treatment preparations. We are making contributions towards the enhancement of health of mankind throughout the world by pursuing the establishment of medical centers in various overseas countries including China, Japan, Singapore, Vietnam, and Arab countries, as well as the transfer of medical technology in addition to our services in Korea.

(d|èt)

성형피부비만클리닉 (Diet Cosmetic Surgery, Dermatology and Obesity Clinic)

It is the best aesthetic medical group in Korea that manages and provides services to our customers on a 1:1 basis in accordance with the individual needs of the customers.

With a plastic surgery clinic, a dermatology clinic, an obesity clinic, an anti-aging clinic, a hair clinic, and a stem cell center and customized cosmetic product, we are provide a One-Stop total solution.

## Global No.1 Beauty Medical Center *diet* Clinic

We are providing customer-oriented medical services that perfectly care for the customers prior to, during, and after surgery by establishing an advanced surgery system on the basis of our abundant clinical experiences over the last 25 years and by equipping ourselves with the latest facilities.

Customers are visiting the Diet Clinic at various locations around the world due to the efforts of the medical staff of the Diet Clinic who have ceaselessly pursued research and taken up challenges to find more effective and improved procedural methods to the extent that every one of our customers are fully content.

The Diet Clinic, taking care of your beautiful transition, is now leading the vitalization of medical tourism in Korea by advancing into the world market beyond the boundaries of Asia. We are providing support for a wide range of medical tourism services including accommodation and interpretation services for the customers from various corners of the world including the USA, China, Japan, Thailand, Vietnam, Singapore and Europe visiting the Diet Clinic.

Joint research  
on stem cells

Provision of  
stem cell  
medical tourism  
service

# d|èt Clinic Special System

## The best medical treatment system in Korea

- Plastic surgery, dermatology, obesity, hair and anti-aging clinic
- Provision of the best medical services by the foremost specialists in each of their respective areas
- Provision of One-Stop total solution ranging from exhaustive customer consultation, accurate diagnosis, management prior to surgery, surgery and procedures, and management after the surgery to return home

## Most Advanced Medical Equipment System

- University hospital level surgical facilities
- Equipped with the latest machines including Ulthera, Fraxel and Yellow Laser, etc.
- Optimal facility for a customized type of medical treatment with a floor area of 1700 square meter
- Specialized system for the collection of stem cells and PLA treatment
- Protocol system that provides One-Stop aesthetic medical services

## Global Network System

- Linkage of stem cell procedures at designated hospitals in overseas
- Transfer of medical technology to overseas countries including China, Japan, USA and Singapore
- Joint research on stem cells with the stem cell research center of EHL Bio
- Establishment of network with 14 clinics throughout Korea

## Customer Satisfaction System

- Provision of 1:1 customized services
- Establishment of a medical system for which safety has been secured
- Full time presence of a nurse dedicated to the recovery room from general anesthesia, 24 hours a day
- Limousine service for a safe return home for customers who have undergone surgery (For the regions of Seoul and Gyeonggi-do)
- Provision of aftercare program

## System Specialized for Overseas Patients

- Provision of airport pickup service
- Full time presence of a professional interpreter and coordinator for each language
- Provision of customized medical tourism services
- Services for linking with accommodation providers and restaurants

# Special Medical Service

## Plastic Surgery Clinic

**Finding your hidden beauty with a beautifully balanced face and bodyline**

Specialists with proven skills with many years of expert clinical experience provides integrated medical treatments for all types of plastic surgery ranging from overall facial plastic surgery including the eyes, nose, and facial contour, to plastic surgery for the body line for breast and legs, etc. at the best facility in Korea.

## Anti-Aging Clinic

**Restores your natural youthfulness**

Restores your healthy and natural youthfulness by providing ideal anti-aging procedures that are perfectly suited for individuals by analyzing their state of health and the biological age of our customers through precision tests including an aging related hormonal test, a hereditary cancer test, a heavy metal test for hair, a blood test and bone density test, etc.

## Dermatology Clinic

**Finding cleaner and more transparent skin through medical skin care**

We are providing effective skin care services by not only treating simple dermatological diseases including freckles, blemishes, wrinkles, pigmentation and lowered resilience but also by using medical drugs, functional cosmetic products and the latest medical devices.

## Obesity Clinic

**Finding your S-line with a golden ratio**

Resident medical staffs including the medical specialists in injection therapy, special equipment treatment therapy, and surgical and non-surgical therapy, etc., nutritional therapist dedicated for obesity, exercise therapist and behavioral therapist, etc. are providing the best medical services by making accurate analysis of the causes of obesity, accompanying diseases and complications.

## Scalp Clinic

**Restoring a youthful scalp and healthy hair**

We restore the health of the hair by analyzing the diverse range of the causes of scalp diseases, and prescribing therapeutic methods optimized for each of the diseases including scalp management programs, stem cell hair transplant, Meso therapy and PRP, etc.

## Other Services

Laser clinic  
Hair removal(epilation) clinic  
Petit cosmetic surgery  
Wedding care  
Management of the meridian system
